The style and order of letters is not compulsory. Á, E, É, I letters are velar and palatal vowels, because those are illabial phonemes, but you can turn those letter forms, if you want to know the difference between palatal and velar vowels. Ü phoneme has 2 magical letters, so Ö phoneme has 2 letters by the 2 letter-variants of Ü phoneme. If we turn vowels, we can make long vowels letters. We can have long sounds, not only sounds for dialects.

			
Velar E	Long E	Closed E (H-variant)	Closed E (better)
			
Ä	Long Ä	Ó	Long OE

Sign in these table are unit letters, other letters let be in Unicode, too. More unit signs: other long vowels, and these signs: XCCS (csúcs: top), XCC (csecs: feeding baby), KDDZS (dzsalit: employer employs employee), 𐌆 or 𐌆DDZ (if DDZ is a ligature, it means that DZ means, so let DDZ be a ligature as unit sign).
